PŶR SEARCH · SETUP GUIDE

Answers you can check, on your iPhone

Free. About ten minutes. You'll need your iPhone and a Google account.

YOUR LINK

theopencodex.org/search

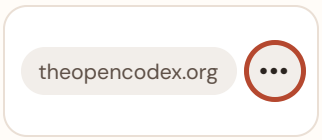

Tap the link on your iPhone (it opens in Safari), or open your iPhone's **Camera** and point it at this code.

On a computer or an Android phone? Just open the link in your browser. These steps are for iPhone.

1 Put it on your Home Screen

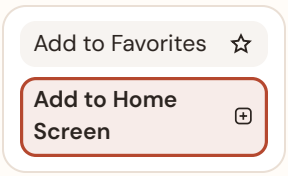

Do this first, in **Safari**. Your settings live inside the Home Screen app, not in Safari.

STEP 1

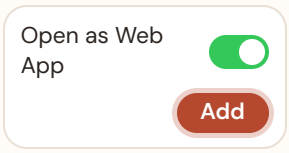

Tap ••• next to the address bar, then tap **Share**.

STEP 2

Scroll down and tap **Add to Home Screen**.

STEP 3

Leave **Open as Web App** on and tap **Add**.

STEP 4

Open **pŷr search** from your Home Screen.

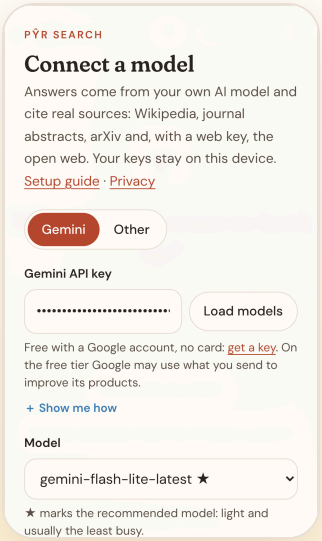

Don't see •••? Tap the Share button □↑ at the bottom or top of Safari instead. If the link opened inside another app (like Messages or Gmail), open it in Safari first.

2 Get your free Gemini key

This is what lets pŷr search use Google's AI. It's free and needs no card.

1. In pŷr search, tap get a key under **Gemini API key**. Google AI Studio opens.
2. Sign in with your Google account. No account? Make a free one at **accounts.google.com**. Accept the terms if Google asks.
3. Tap **Create API key**. If it asks about a project, pick the one it suggests.
4. Tap the copy icon next to your new key.
5. Go back to pŷr search (tap **Done**, or switch apps). Paste the key, tap **Load models**, keep the model marked ★, and tap **Save** at the bottom.

Stuck? Tap **+ Show me how** under the key box for these steps inside the app. On Google's free tier, Google may use what you send to improve its products, so don't ask about anything private.

The setup screen

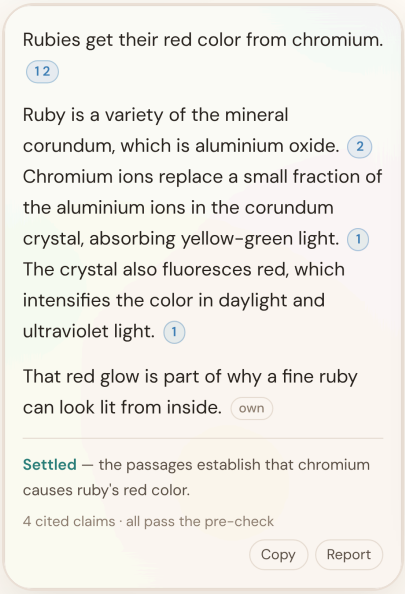

3 Add web search OPTIONAL

For news and anything too new for an encyclopedia. Free: 1,000 searches a month, no card. You can skip this and add it any time.

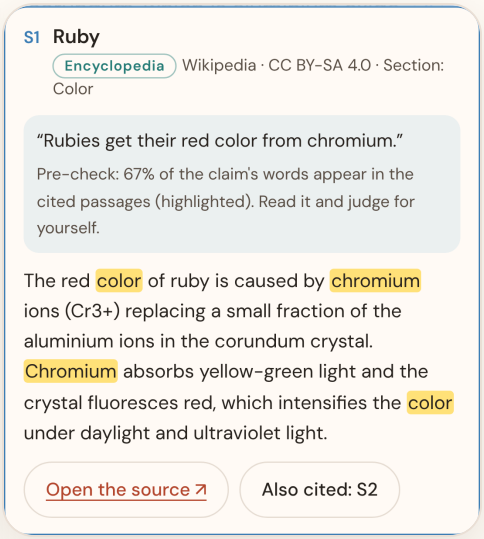

1. In setup or **Settings** (sliders, top right), tap Tavily under **Web search key**. Make a free account.
2. Your key is on the first page after you sign in. It starts with **tvly-**. Tap its copy button.
3. Back in pŷr search, paste it into **Web search key** and tap **Save**.

4 Ask, then check

Type a question at the bottom and tap ↑. pŷr searches Wikipedia, journal articles and research papers (and the web, if you added a key), and the answer appears with a small number after each sentence.

A number after every sentence.

Tap a number to read that passage, with the matching words highlighted.

What the numbers mean

- 2 **Blue:** the automatic check found the sentence's words in passage 2. Still worth a look.
- 2 ! **Amber:** check closely. The passage may not say quite that, or a number doesn't match.
- 9 × **Red:** points to a passage that doesn't exist. Don't trust that sentence.
- own The AI's own reasoning, not from a source.

Open the source on any passage shows the full page it came from.

5 Good to know

Keep going

Ask a follow-up in the same box and it searches again. + starts a new search; the clock button shows past ones.

It stays on your phone

Your keys and searches are saved only on this iPhone. Nothing is sent to Metis Aegis unless you send a report. Keep your keys private, like a password.

If it says "rate-limiting"

Free accounts allow a few questions a minute. Wait a minute and try again. "Couldn't reach" means check your internet.

Something off?

Tap **Report** under an answer to tell us about anything wrong or harmful. Questions: metisaegisllc@gmail.com.
